Notes:

1. The Minimum Dimensions Are Shown In Above Table. Some Allowances Should Be Considered For Sloping Hoistways.

2. Above Dimensions Are Based On Centre Opening Door Arrangement. For Other Arrangements Consult Gravity.

3. When Non Standard Capacities & Dimensions Are Required, then Consult Gravity.

CUSTOMER GUIDE

Machine room ladder should have proper railing with footing steps. Necessary anti rust painting should be done to protect against rain water & atmospheric condition.

Machine room main switch should be as per required rating & with suitable independent earthing.

Provide Machine room window with rain protection shade to protect machine room equipment from rain water entering in machine room.

Lintel should be of 350 mm height & depth is as per thickness of wall (preferably 230 mm.) Length of lintel is depending upon opening/hoistway width.

Bulkhead fitting in hoist way should be with cover & 4" away from corner of hoist way.
